

OMNI Customer Portal — Functionality Specification

This document describes **what every screen, button, and flow must actually do** — the logic behind the UI, not the visuals. The visuals already exist (Figma + the two builds below). What's missing is the *behavior*: buttons that actually change state, flows that end in a confirmation, and offers/gifts that follow real business rules.

Read this next to the two live builds:

Build	URL	Use it for
Reference (functional)	https://omni-customer-portal-delta.vercel.app	The behavior described here is implemented and working. Click through it.
Current (to be fixed)	https://omni-customer-portal-rho.vercel.app	Visually close, but the functionality below is missing or wrong.

How to use this doc: every section states the *rule* (what must happen) and the *why*. Don't reproduce screenshots — reproduce the behavior. If a button exists but does nothing, it is not done.

0. Non-negotiable global rules

These apply to **every** page and flow. Most current bugs are violations of one of these.

R1 — Every action button must complete a real flow

No dead buttons. No bare "notification" toast standing in for a flow. The pattern is always:

```
[Action button] → Confirmation modal (review what will happen)
                  → [Confirm] → processing → Success/"Done" screen (styled)
                  → return to the updated page (state has actually changed)
```

Example: pressing **Restart** must restart the subscription. Pressing an **offer** must open its confirmation, and confirming must show a styled "done" screen and apply the change. "Upgrade to quarterly" must run its full flow — not just flash a notification.

R2 — Actions are scoped to ONE subscription, never all

If a customer has two subscriptions, cancelling/reactivating/pausing/skipping **one** must affect **only that one**. The current build cancels *all* subscriptions at once and reactivates *all* at once — that is a data-model bug. Every action takes a `subscriptionId` and mutates only that record.

- Manage page renders **one card per subscription**.
- Each card has its own action row and its own status (**active** / **paused** / **inactive**).
- A global "cancel all" does not exist.

R3 — Retention hierarchy: the "stay" button is always the highlighted one

Anywhere the customer is choosing between *keeping/saving* the subscription and *continuing to cancel*, the **save action is the primary highlighted button** and the **cancel/continue action is a de-emphasized text link or outline button**.

Example: on a cancellation save screen offering "Skip next order", the **Skip** button is highlighted (primary); "Continue cancellation" is a small secondary link. Apply this to **every** flow that has a keep-vs-leave decision.

Give your routine enough time to work

Createine works best when dose, timing, and consistency line up over a few weeks. Try a steadier routine before closing the plan.

WHAT BEST DESCRIBES IT?

Less than 4 weeks

Taking inconsistently

Not sure about dose

Expected faster change

RECOMMENDED OPTION

Build my consistency plan

Selected: Less than 4 weeks

4 to 12 week consistency window

Daily serving matters

Timing should fit your routine

Build my consistency plan

Move to 8 weeks

[Review final step](#)

90 Servings

R3 in practice: the retention action ("Build my consistency plan") is the solid primary button; "Review final step" (continue to cancel) is a small text link. The eye lands on staying.

R4 — State drives the UI, from one source of truth

There are exactly three subscription states. The whole portal reads from a single status value per subscription and re-renders when it changes:

State	Meaning	Primary CTA shown
active	Normal, orders shipping	Manage / Order now / Skip / Pause / Cancel
paused	Temporarily halted, resumes on a date	Resume subscription
inactive	Cancelled / lapsed	Restart subscription (winback)

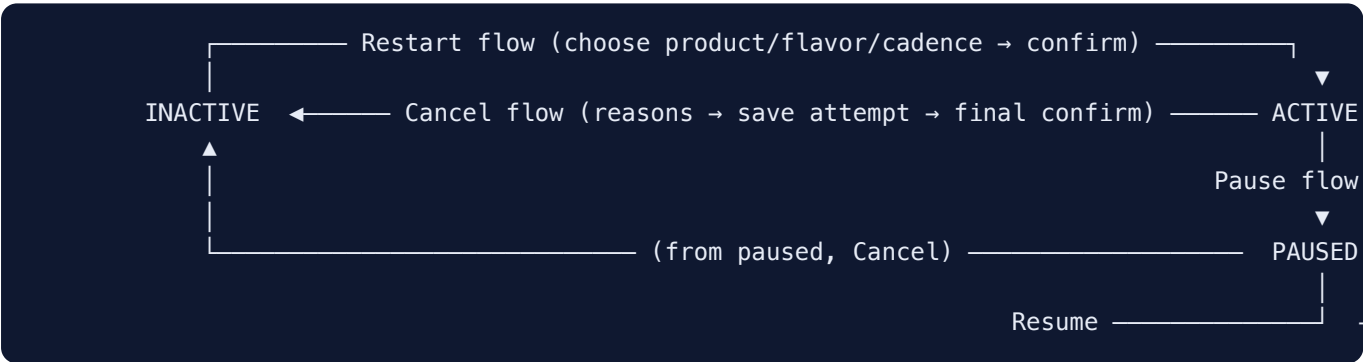

A customer must never see Pause/Skip/Cancel/"Order now"/"Next order" while `inactive` . A customer must never see "Restart" while `active` .

R5 — Offers and gifts are segment-gated

Offers are not shown to everyone. Each offer has a **visibility rule** based on the customer's current plan/history (see §7). If the rule fails, the offer is hidden — not greyed out.

1. Subscription states & transitions

The reference build implements this exactly. Every transition below is a real action the customer can trigger, and each ends in a styled confirmation.

Transition	Trigger	Result	Ends with
inactive → active	Restart flow confirmed	Subscription reactivated (that one)	Styled "You're back" success screen
active → paused	Pause modal or cancel-flow "Pause" save	Deliveries halted, resume date computed	"Paused — resumes {date}" confirmation
paused → active	Resume subscription	Deliveries resume	"Resumed" toast + updated page
active → inactive	Cancel flow final confirm	Subscription cancelled (that one)	"Your subscription has been cancelled" screen

Resume date logic (pause): `resumeDate = today + N weeks` from the chosen pause length (4/8/12 weeks etc.). Show it everywhere the paused state appears.

The same page, three states — layout stays identical, content and CTAs swap:

NEW FLAVOR

OMNI Creatine Gummies x Electrolytes

Your daily creatine routine just got an upgrade. Strength support from OMNI Gummies, hydration support from OMNI Electrolytes, and an easier way to stay consistent.

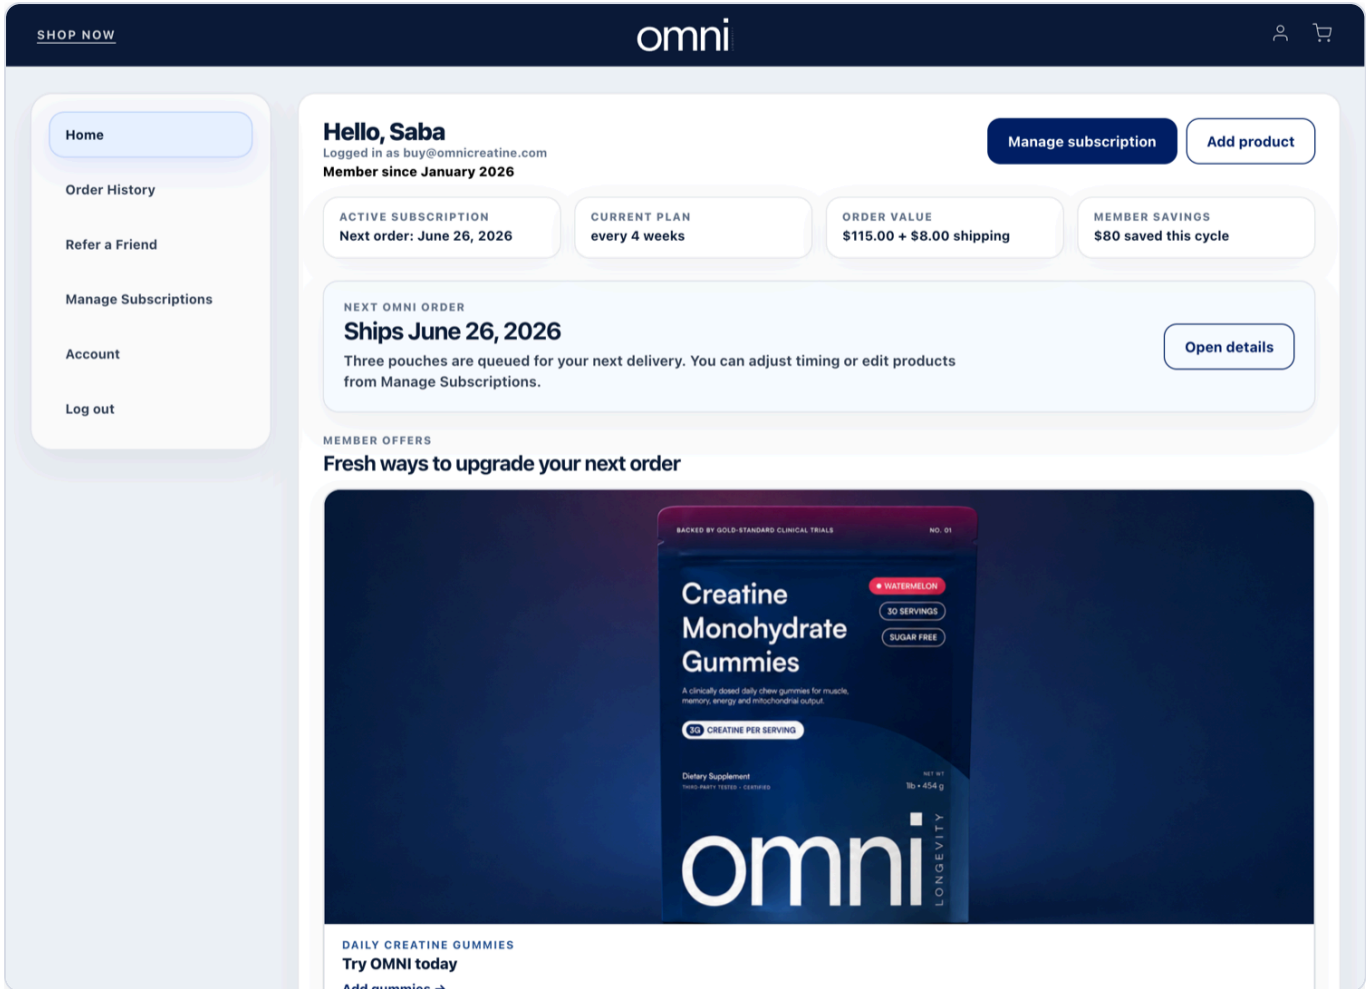

TRY THE STACK

DAILY CREATINE GUMMIES

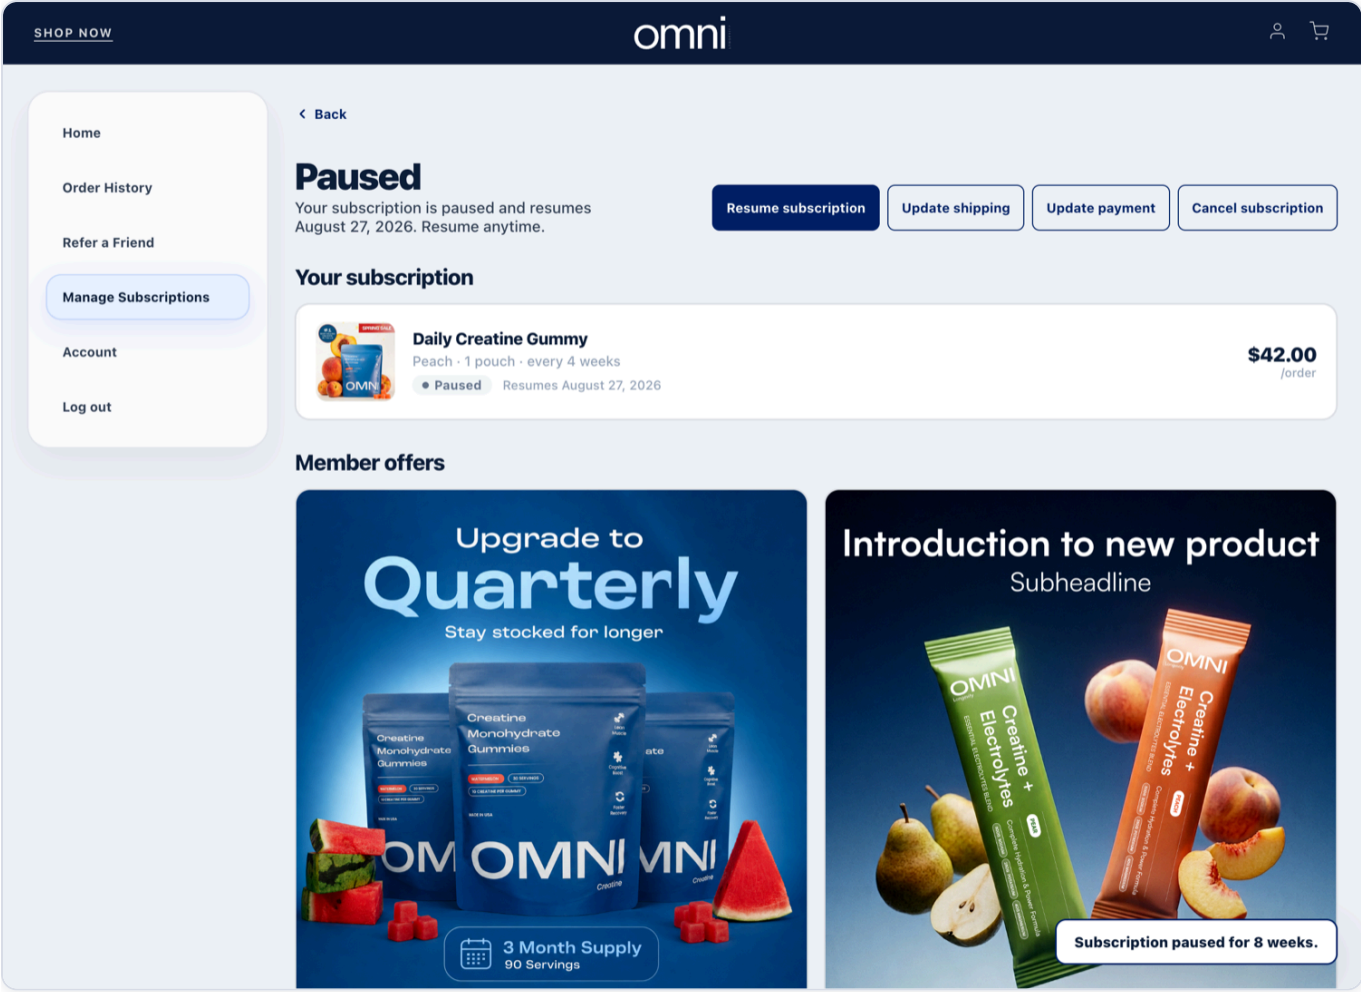

Restart Daily Creatine Gummies

Restart now →

inactive : status "Inactive", last product/cadence/order, primary CTA is Restart subscription.

active : next order date, plan, order value, savings; primary CTA is Manage subscription.

paused : "Paused" title + resume date, muted badge, primary CTA is Resume subscription.

2. Home page

Purpose: account overview + entry points. Same layout in all states; content swaps.

Element	active	paused	inactive
Quick actions	Manage subscription · Add product	Resume subscription · Manage	Restart subscription · View past orders
Summary strip (4 cells)	Next order · Plan · Order value · Savings	Paused · Resumes {date} · Plan · Order value	Inactive · Last product · Last cadence · Last order
Command card	"Ships {date}" + Open details	"Resumes {date}" + Resume now	"Ready to restart?" + Choose a new routine
Offers	Upsell offers (\$7)	Upsell offers	Winback/restart offers

Logic: the strip and cards read from the live subscription record. If the customer has multiple subscriptions, show a compact list/among cards — each with its own status — rather than collapsing them into one summary.

3. Manage subscription page (active)

One card per subscription. For each active subscription the action row is:

Button	What it must do
Order now	Confirmation modal ("charge saved payment, ship queued items now") → confirm → success.
Next order date	Date picker modal → save → "Next order date updated" + the date on the page changes.
Skip	"Skip this order?" confirm → shows the exact date being skipped → confirm → skip-success screen; subscription stays active.
Pause	Opens Pause flow (§5).
Cancel	Opens Cancel flow (§6).

Product card shows: product name, flavor · quantity · cadence, **Active** badge, "Next {date}", price/order.
All values come from that subscription's record.

OMNI

OMNI

Active manage page: action row (Order now · Next order date · Skip · More), product card with Active badge, and member offers below.

3.1 Free gift — one-time, segment-specific (fixes Levani #3)

The "Claim Free Gift" card sits in the manage workspace. It must behave as a **one-time gift**, never as a recurring subscription line.

- Tapping the card opens a modal with two paths:
- **Ship with my next order** → confirm → the one-time gift is attached to the next shipment → success toast ("locked in, ships with your next order").
- **Send to a friend** → opens a **shipping-address form** (name, address, city, state, zip, contact) → send → styled "gift confirmed, we'll get it to {friend}" overlay.
- After claiming, the gift is **locked** (the card hides / can't be re-claimed) so it can't become recurring or be claimed twice.
- **Which gift** is shown is segment-driven (customers who did XYZ → free peach; customers who did XY → a different one-time gift). This is a display/eligibility rule per customer.

OMNI Creative + Electrolytes

3 Month Supply 90 Servings

"Send to a friend" opens an address form; the gift ships to that address as a one-time item.

3.2 Swap flavor

- Select Peach or Watermelon → **Confirm swap** → review modal (shows the new flavor) → confirm → applies to the **next order only**; product and frequency stay the same.

Flavor swap always routes through a confirmation before it applies to the next order.

3.3 Recommended products — "You might also like"

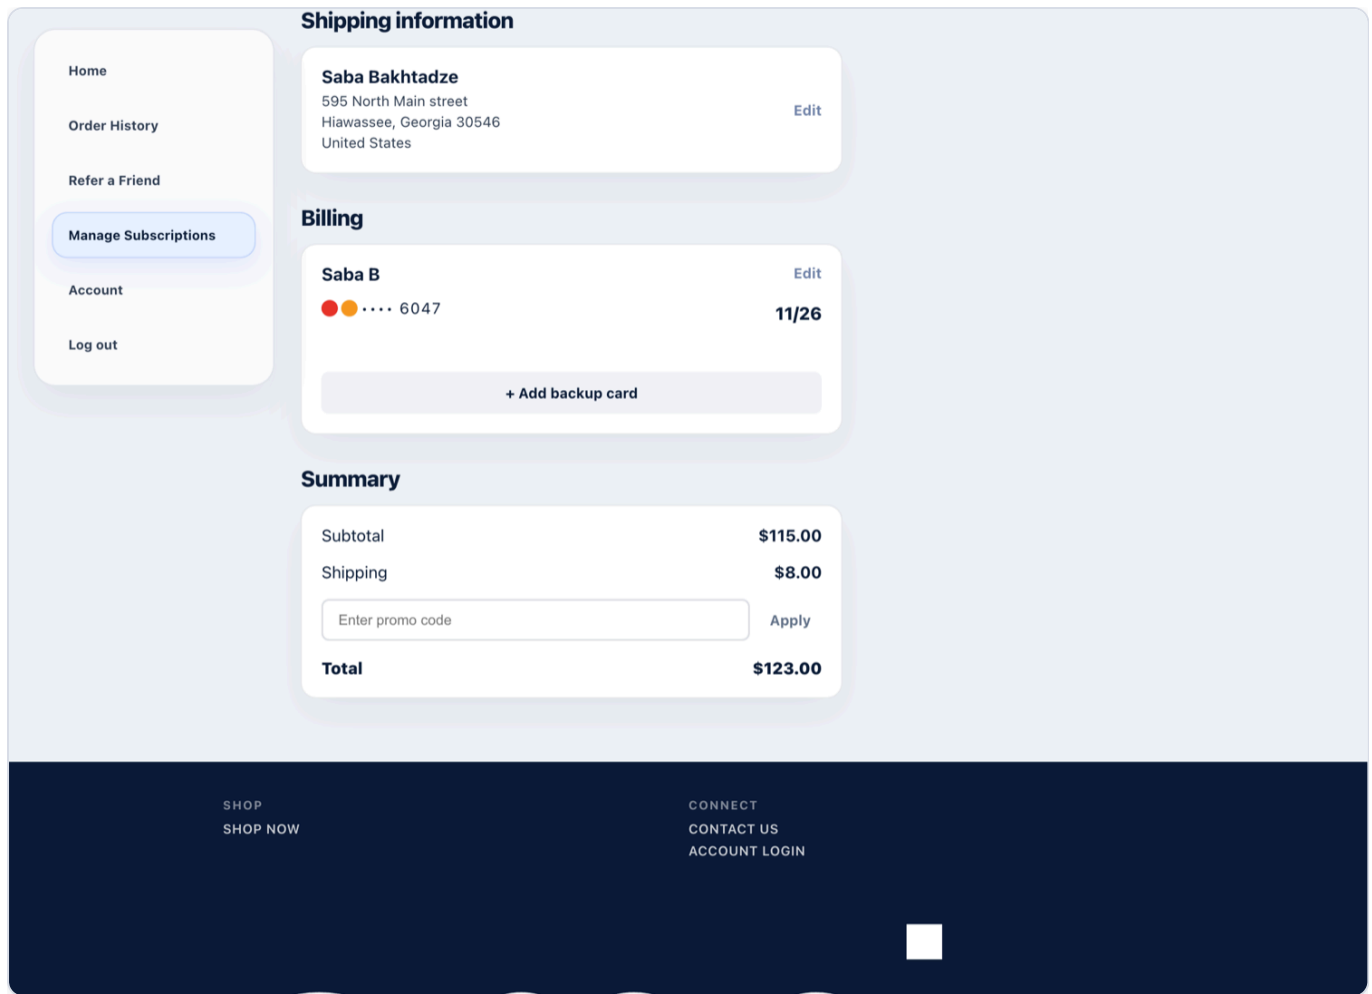

- Each recommended product has a **variant selector** (flavor / quantity) and price.
- **Add** → "Add to next order" confirmation → the selected variant is added to the upcoming shipment (flavor + final pricing confirmed before checkout).

3.4 Shipping / billing / backup card

- **Edit shipping** → address form → save → reflected on the page.
- **Edit billing** → payment form → save (connects to the payment provider in production).
- **Add backup card** → card form → stored as a fallback, charged only if the primary card fails.

3.5 Order summary

- Shows **subtotal + shipping + total** for the next order.
- **Coupon / promo field** with Apply → validates the code and updates the total.

The lower manage workspace: shipping, billing (with backup card), order summary + coupon, and recommended products — every Edit/Add opens a real modal that saves.

4. Paused state (manage + home)

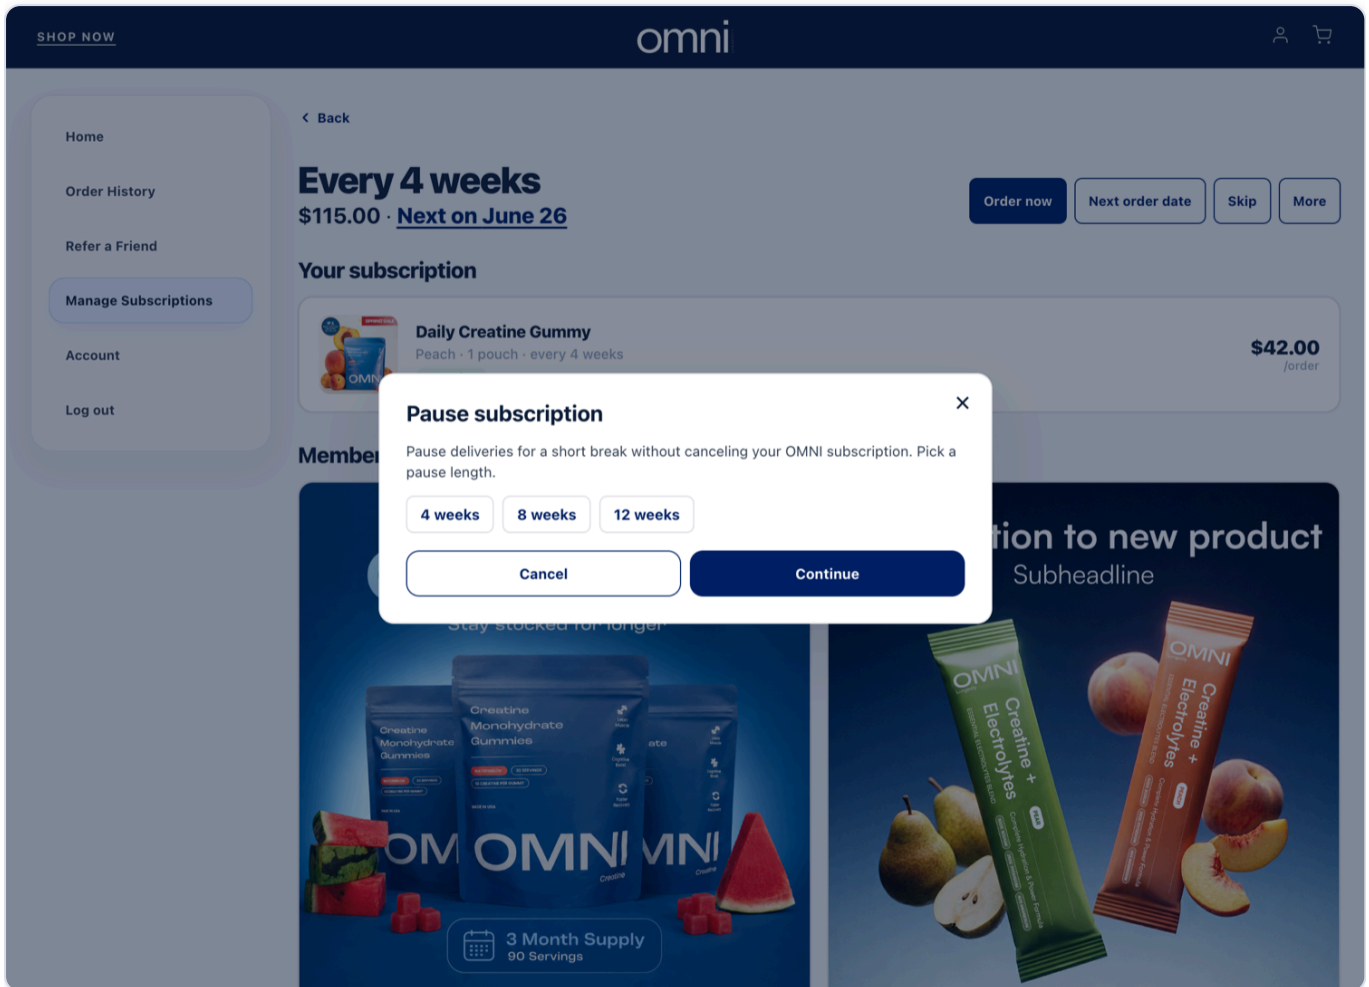

- Title: **Paused**; subcopy "resumes {date}. Resume anytime."
- Action row: **Resume subscription** (primary) · Update shipping · Update payment · Cancel.
- Product card: **Paused** badge (muted, not green) + "Resumes {date}".
- **Resume subscription** → immediately returns that subscription to **active**, clears the pause, shows a toast, next order reschedules. (A confirm modal is optional here since resuming is non-destructive.)
- No "Order now"/"Skip" while paused (nothing is scheduled to ship).

5. Pause flow

Entry points: Manage "Pause", and the Cancel flow "Pause" save option.

1. Choose pause length: 4 / 8 / 12 weeks (cancel-flow variant also offers 2 weeks / custom).
2. Confirm → subscription becomes **paused**, **resumeDate** computed.
3. Styled confirmation: "Paused — resumes {date}. Resume anytime from the portal."

4. Only that subscription is paused (R2).

Pause flow: pick a length, confirm, subscription moves to **paused** with a computed resume date.

6. Cancellation flow (fixes Levani #1 and #2)

This is the most important retention surface. Full step order:

```
Cancel intro (value reminder / skip-next offer)
  → Reason select          (each reason is DISTINCT – R-fix below)
  → Save page              (reason-specific retention offer; SAVE button highlighted – R3)
  → [optional branch]      (Skip / Pause / Cadence / Savings / Product swap – each ends "Sa
  → Rescue page            (last retention offer; recommended action highlighted)
  → FINAL CONFIRMATION     (⚠️ required – "Cancel subscription" vs "Contact support")
  → Cancelled success screen
```

Fixes required (from feedback)

- **#1 – Missing final confirmation step.** There must be an explicit final step where the customer confirms cancellation (destructive button) or backs out. Cancellation must **never** complete in one click from a reason. The reference build's **Final choice** step is the model.

- **#2 — Every reason must render its OWN content.** The current build shows the same save/reason content for every reason selected. Each reason maps to a **unique** headline, body, sub-reasons, retention cards, and CTA set. Selecting "Too expensive" shows the savings offer; "I'm stocked up" shows skip/slow-cadence; "Flavor not a fit" shows a product swap; etc. If two reasons show identical content, it's a bug.
- **R3 applied here:** on the save page and rescue page, the **retention/save action is the primary highlighted button**; "Review final step" / "Continue to final cancellation" is a small de-emphasized text link. The customer's eye should land on staying, not leaving.
- **R2 applied here:** cancelling cancels **only the selected subscription**. Do not loop over and cancel all of the customer's subscriptions.

Reason → retention mapping (each distinct)

Reason	Retention offer on save page
Haven't seen results / hard to stay consistent	Consistency/habit plan, move to 8 weeks
I'm stocked up	Skip next order, move to 8/12 weeks, pause
Too expensive	Apply 50% off next 3 orders, skip + keep offer
Just wanted to try once / no longer need it	Skip, pause, slow cadence
Flavor/texture not a fit	Swap flavor or switch to stick packs
Too much sugar	Switch to sugar-free electrolyte stick packs
Digestion	Gentler routine, switch product, contact support
Ships too fast	Move next date out, 8/12 weeks, skip
Product/packaging issue	Route to support (with photo + lot # fields), pause
Found an alternative	Comparison + savings offer
Trouble editing	Show portal controls, contact support
Other	Free-text note, flexible options

Key screens in the flow:

CANCELLATION OPTIONS

Want to adjust anything before you cancel?

Choose the closest option so we can show the most useful next step.

☐ I haven't seen results yet

Give consistency, dose, and timing enough time to line up.

☐ Hard to remember or not consistent with routine

Build the habit first, then decide if the subscription fits.

☐ I'm stocked up

Skip or slow down delivery without losing your subscription.

☐ Too expensive to continue

Review a stronger member offer before cancelling.

☐ I don't like subscriptions, I just wanted to try once

Keep control without pressure.

☐ Flavor or texture not a fit for me

Switch product format before you leave.

☐ Too much sugar or too sweet

Try sugar free stick packs instead.

☐ Not agreeing with my digestion

Try a gentler routine before cancelling.

☐ Orders ship too fast or frequently

Slow deliveries down without cancelling.

☐ I no longer need it

Pause or slow delivery in case your routine changes later.

☐ There's an issue with my gummies

Share details so support can resolve it.

☐ Packaging issue with my order

Tell us what happened so support can fix it.

☐ I found a better alternative or another product

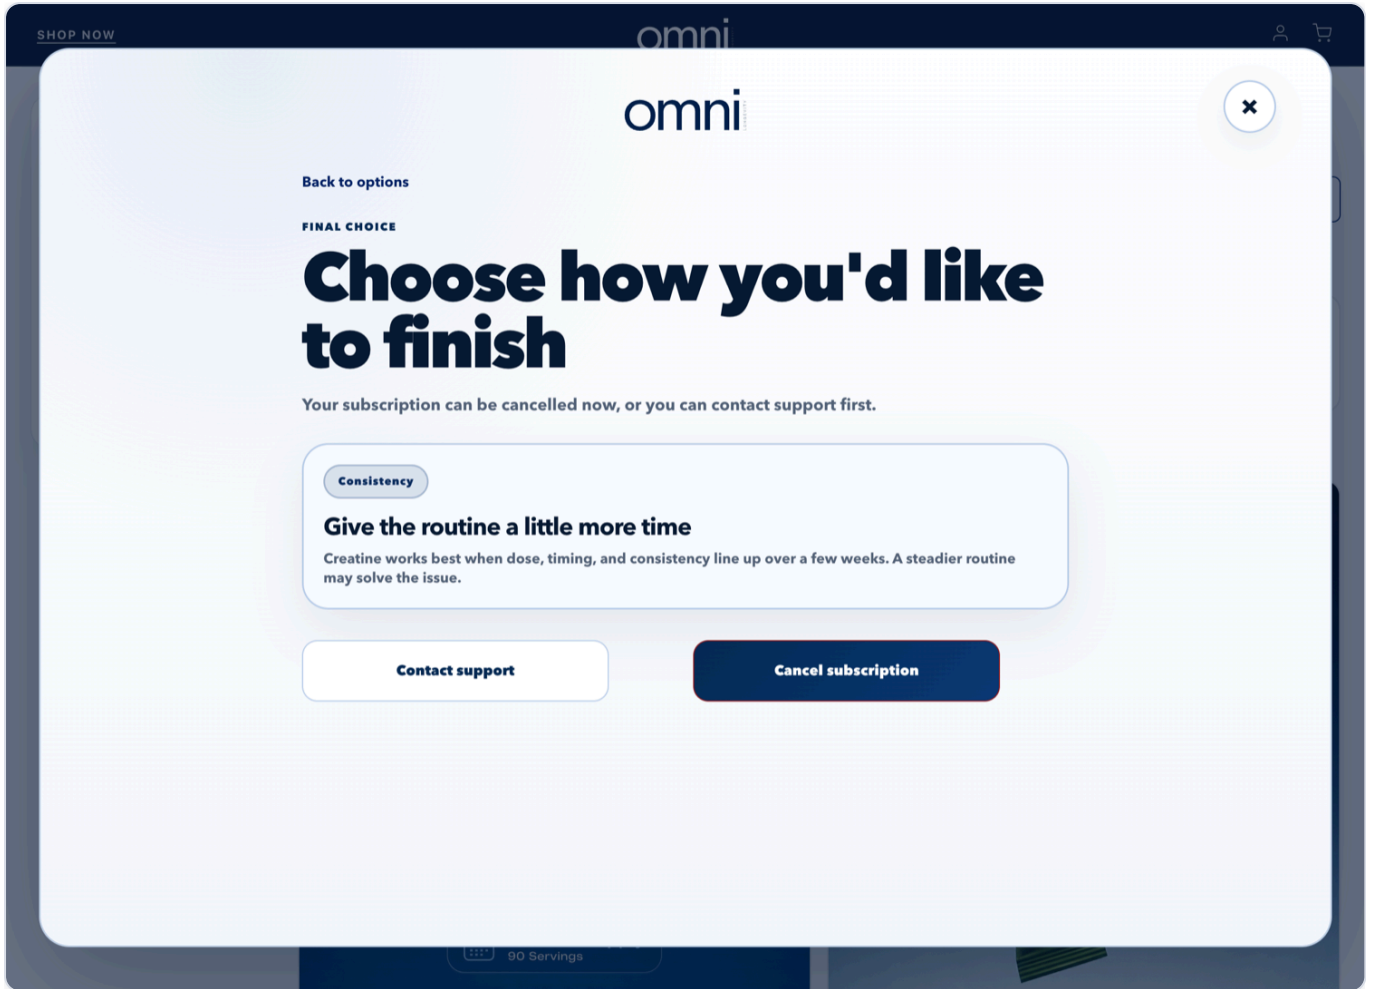

Compare quality and convenience before making the final call.

☐ I'm having trouble editing my subscription

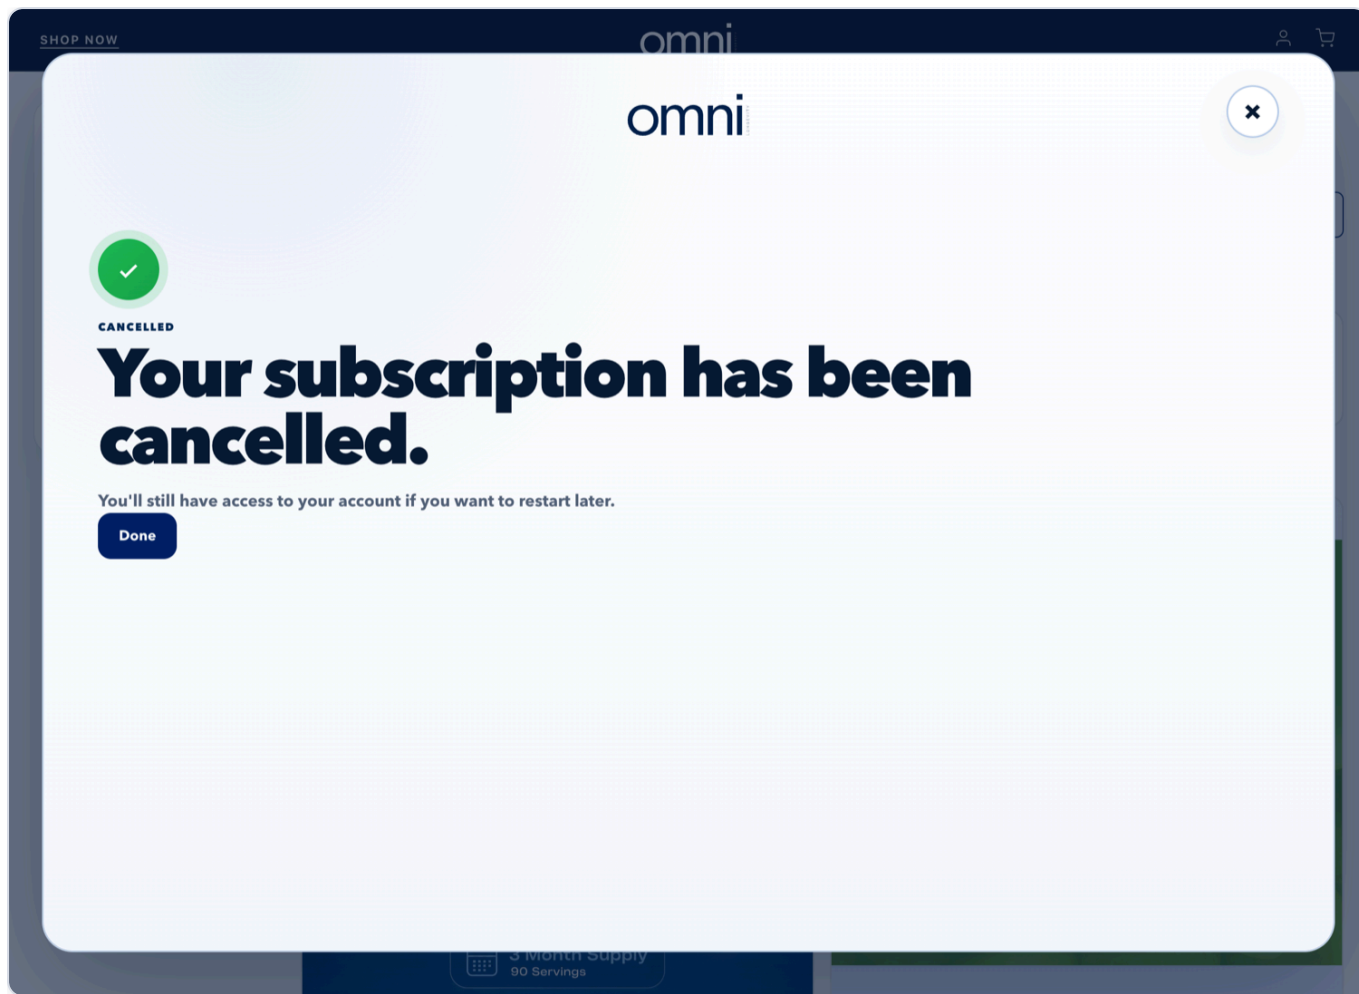

Get help with the portal controls.

☐ Other reason

Reason select. Each reason must lead to its own distinct save content (fixes #2).

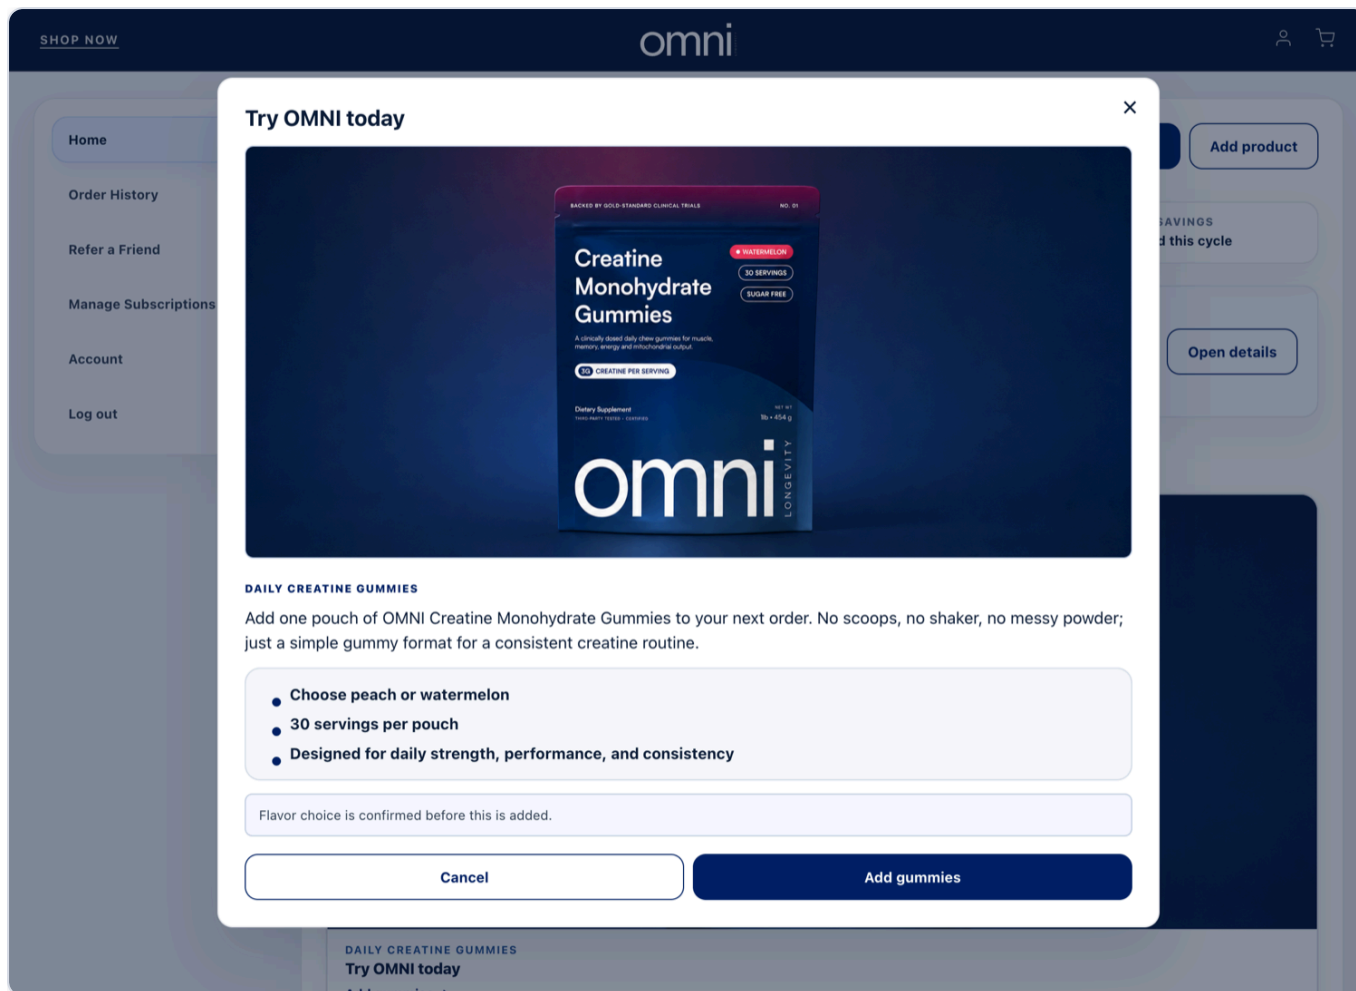

Required final confirmation step (fixes #1): destructive "Cancel subscription" vs "Contact support". Cancellation never completes in one click.

Styled cancelled screen — the flow lands here; only the selected subscription is cancelled (R2).

7. Offers (fixes Levani #3 and #4)

Every offer follows R1: **card** → **confirmation modal (review)** → **confirm** → **styled "done" screen** → **change applied**. Today most offer buttons open a modal but confirming does nothing. That must be wired end to end.

Offer review modal: the customer sees exactly what will happen before confirming. Confirm must apply the change and show a styled success — not silently close.

7.1 Quarterly upgrade — segment-gated (fixes Levani #4 + the "quarterly idea")

The quarterly offer's purpose is to move **light** subscribers to a better-value quarterly cadence. It is **not** relevant to customers who already receive a large per-delivery volume.

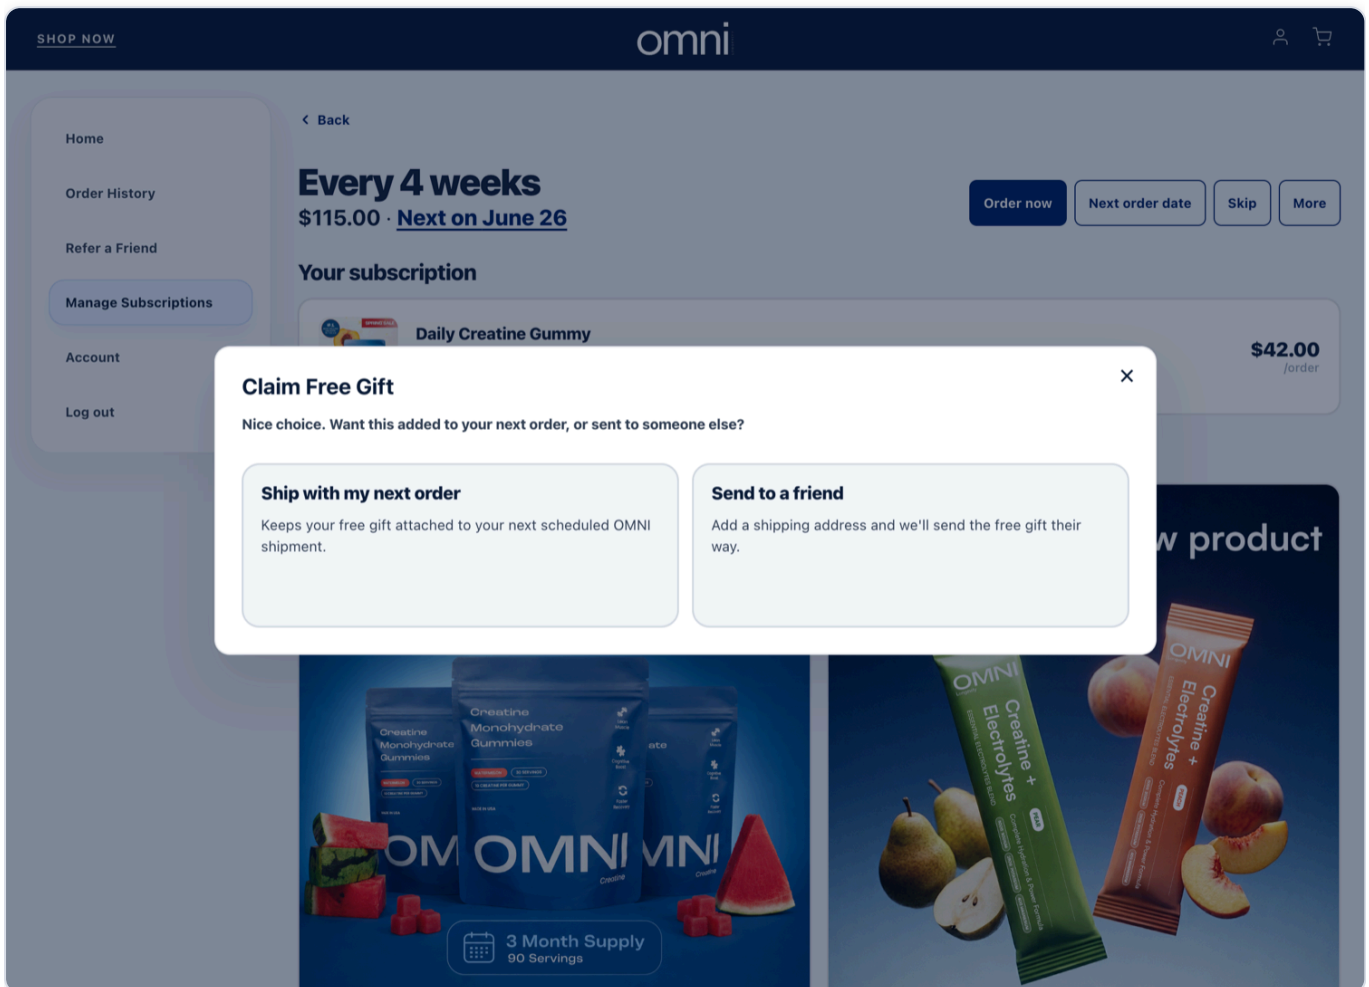

Visibility rule: - Show the "Upgrade to Quarterly" offer to customers on a monthly cadence with **1 or 2 pouches** per delivery. - **Hide** it for customers already receiving **3 pouches** per delivery (or already on a quarterly plan) — they don't need it.

Behavior when taken: confirmation modal explaining the new billing/cadence → confirm → the subscription's cadence updates to quarterly → styled "done" screen. Not a bare notification.

7.2 Free gift — one-time, segment-specific (fixes Levani #3)

- The free gift is a **one-time item added to the next order**, NOT a new recurring subscription line. Claiming it must never create a recurring product.
- **Which gift** is shown depends on the customer segment / history:
- Customers who did **XYZ** → see e.g. **free Peach** gift.
- Customers who did **XY** → see a **different** one-time gift.
- Claim flow: card → modal with two paths → confirm → styled success; the recurring plan is unchanged:

- **Ship with my next order** — the one-time gift rides along on the next scheduled shipment.
- **Send to a friend** — opens a shipping-address form and sends the gift to that address instead.
- Once claimed, the offer is **locked** (can't be re-claimed) so it stays a one-time gift.
- Full behavior of this flow is documented in §3.1.

The free gift is a one-time item with two paths (self / friend) — never a recurring subscription line (fixes #3).

7.3 Other offers (stack, add electrolytes, swap flavor, add gummies)

Each: card → review modal → confirm → applied to the **next order** (one-time) or to the **subscription** (recurring) as stated in the offer copy → styled success. Be explicit in the modal about which one it is, so it's never ambiguous like the gift bug.

8. Restart / reactivation flow (inactive → active)

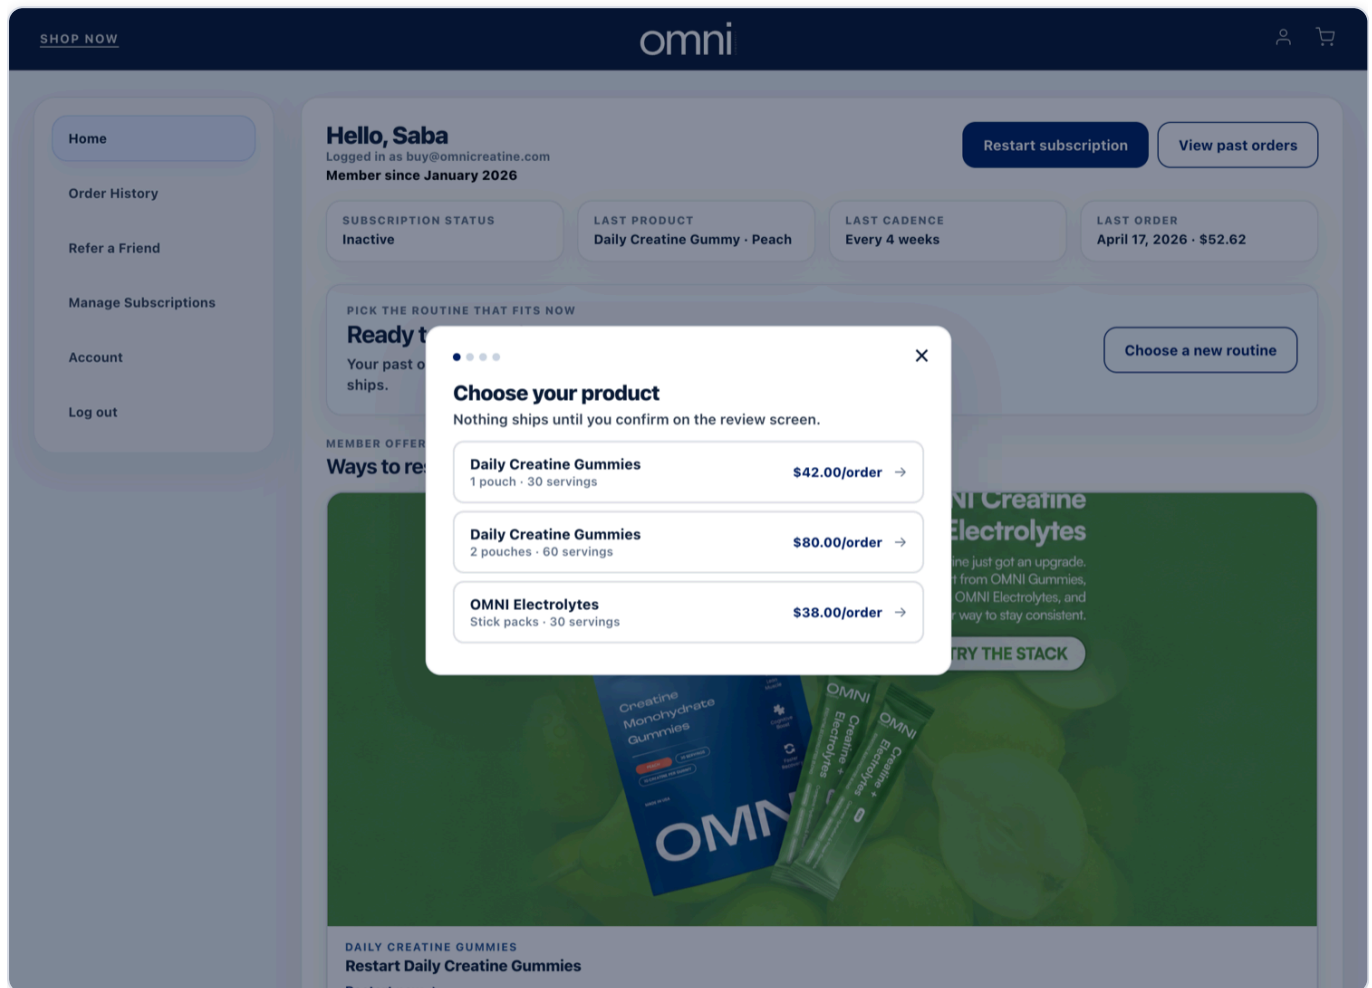

Entry points: Home "Restart", Manage "Restart", inactive offer cards, callouts on Order History / Refer a Friend.

Steps: **Product** → **Flavor** → **Cadence** → **Review** → **Confirm** → **"You're back" success screen**.

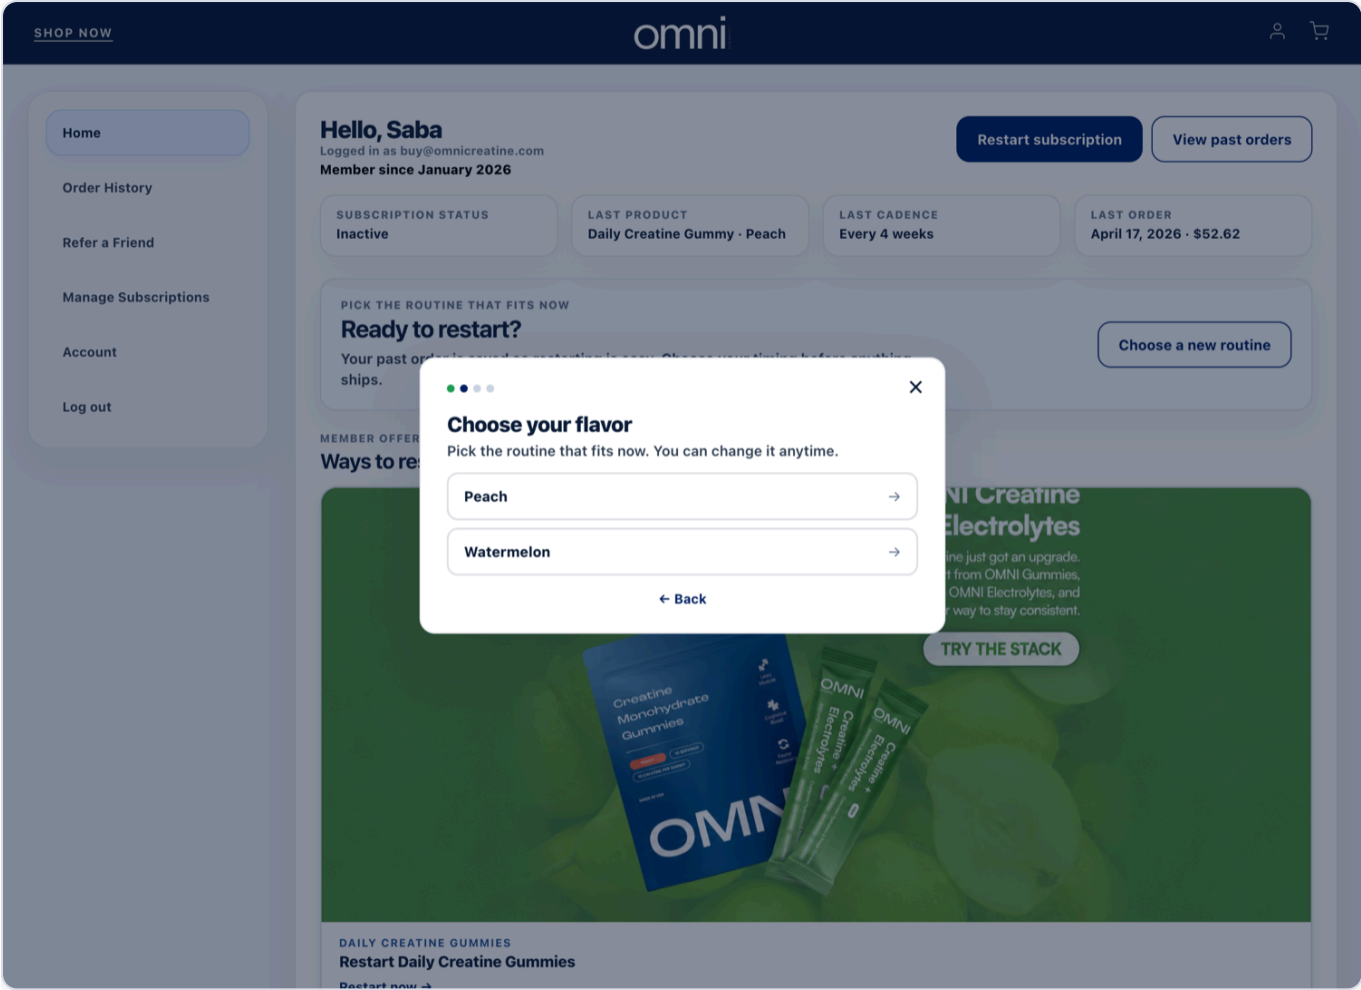

- Nothing ships until the Review step is confirmed (say so on each step).
- Confirming sets **that** subscription to **active** with the chosen product/flavor/cadence.

- The success screen is styled (green check, "You're back", product summary, perks, "Back to portal") — the customer should feel good about returning, not just get a toast.
- R2: reactivation activates **only the one** subscription, not all.

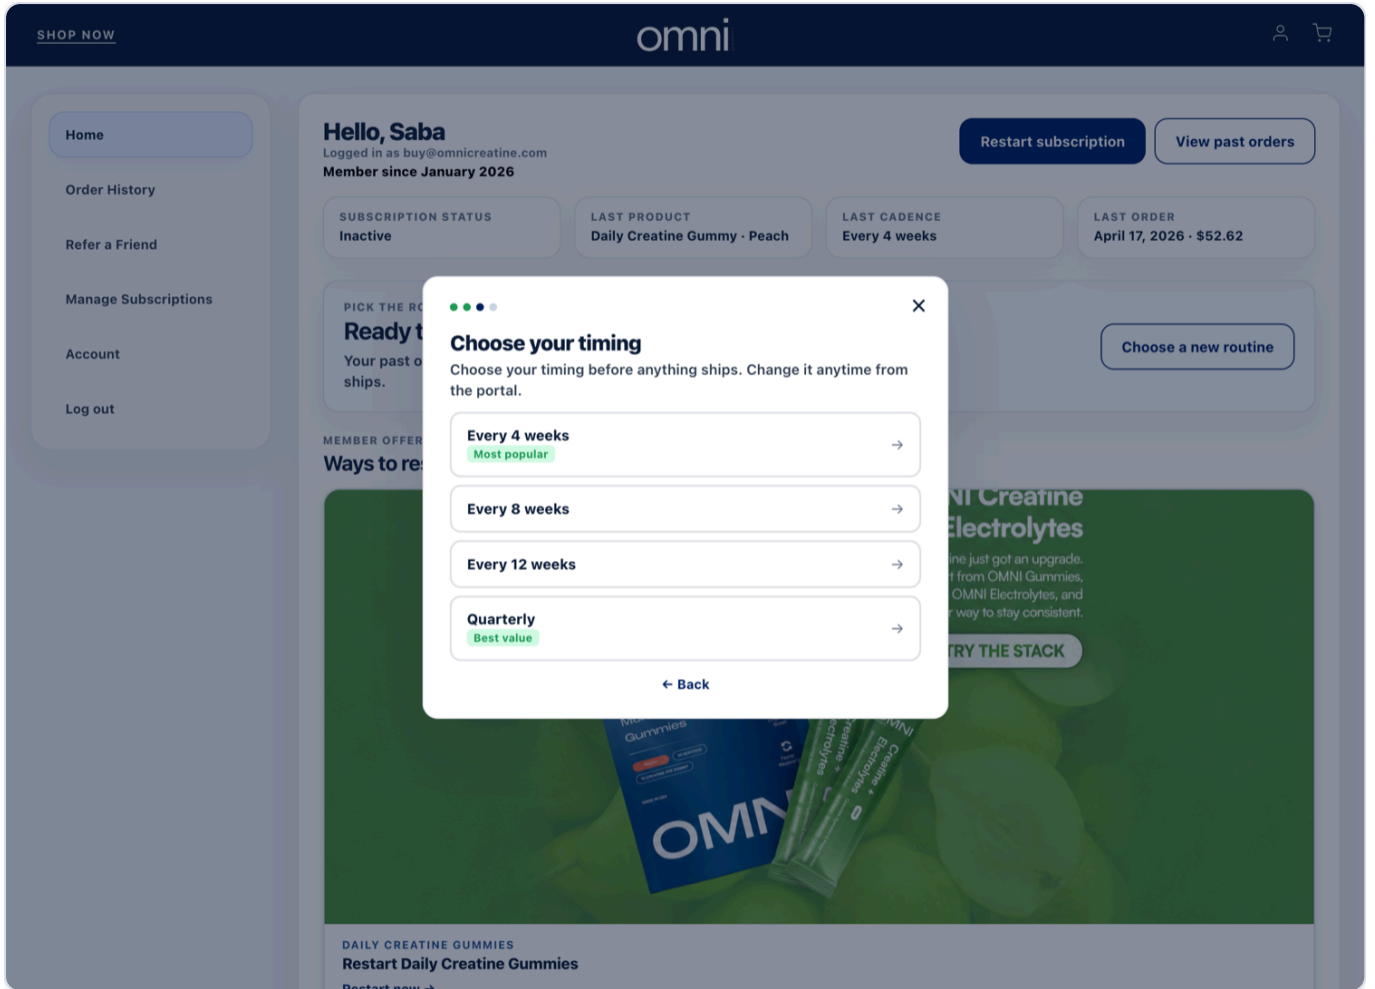

The four steps, then the styled success screen:

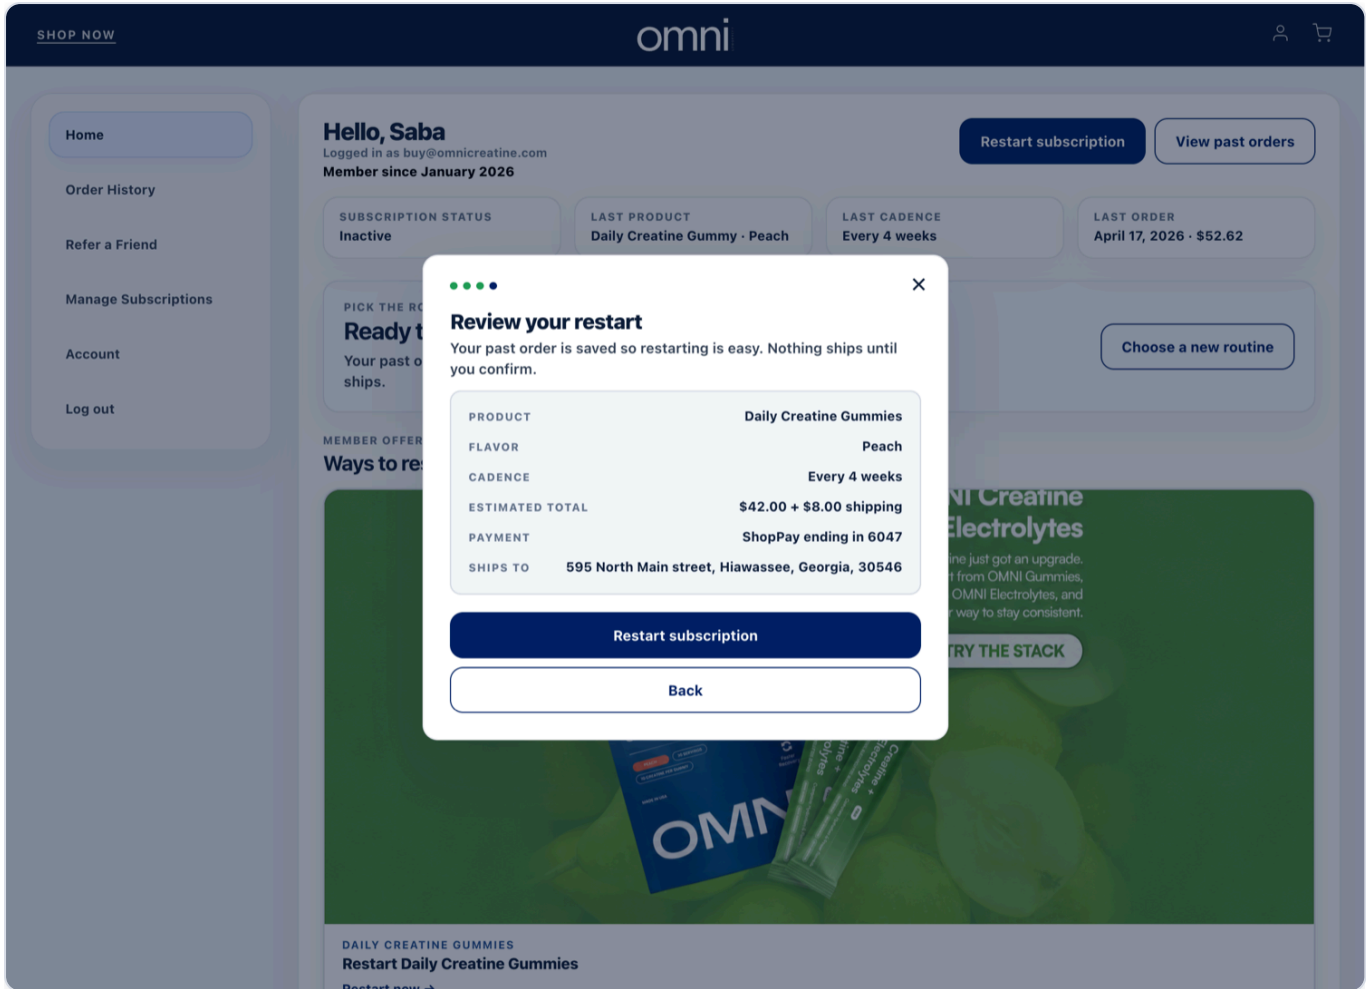

Step 1 — product.

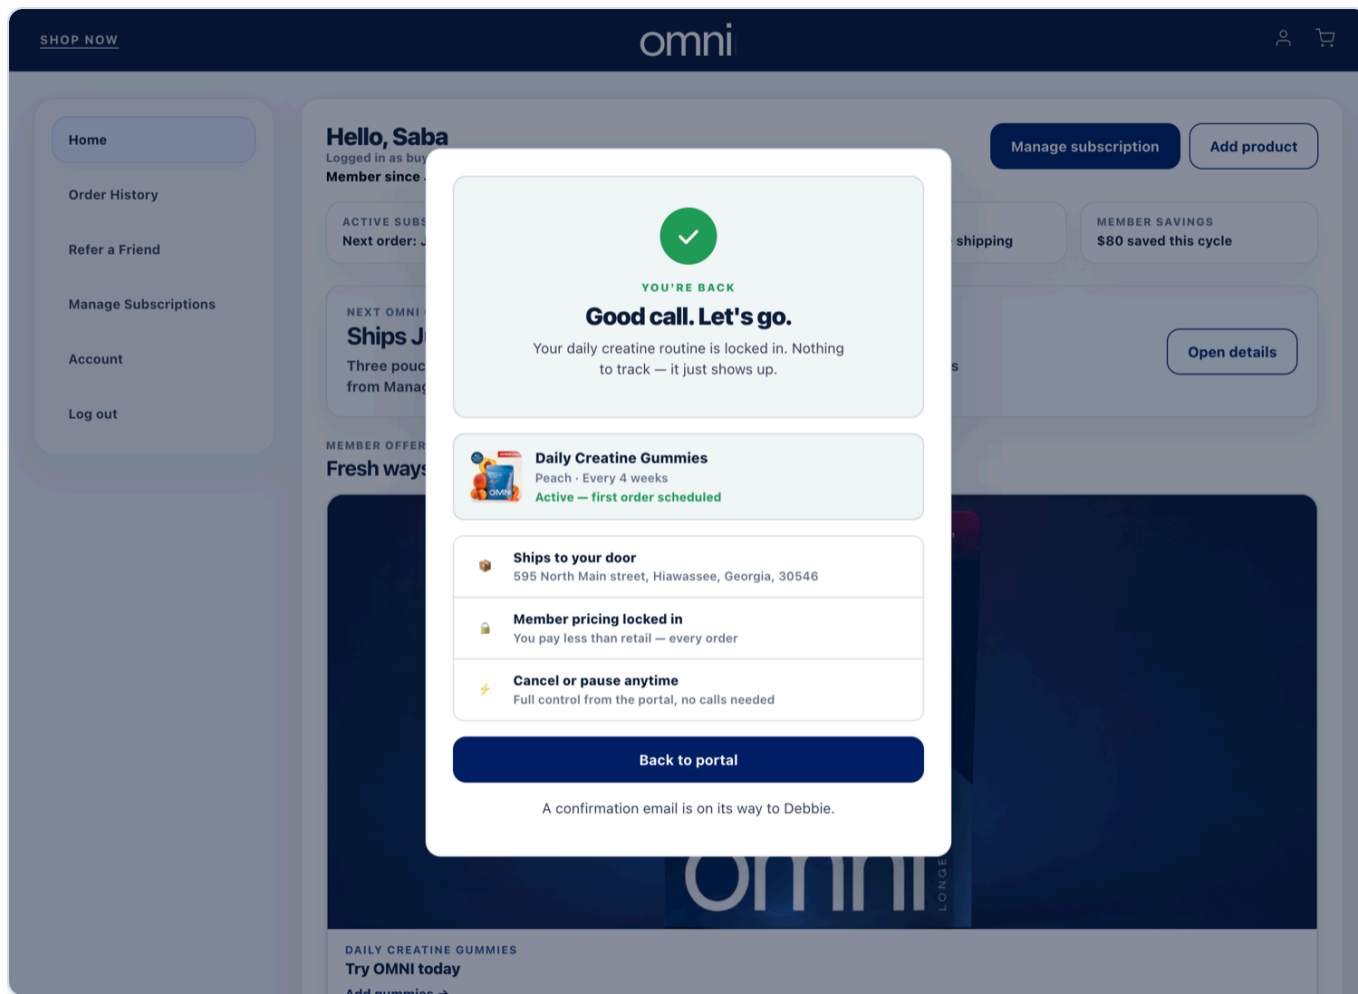

Step 2 — flavor.

Step 3 — cadence.

Step 4 — review (nothing ships until this is confirmed).

Success: "You're back" — product summary, shipping/pricing perks, single button back to the portal.

9. Order History

- Lists past orders (number, date, status, product, total) with "View details".
- When **inactive** : show a restart callout above the list ("Want to restart your OMNI routine?" + Restart button → §8).
- "View details" opens an order detail modal/screen (not a dead button).

10. Refer a Friend

- Eligibility form (name, email, phone) → submit → confirmation of submission.
- When **inactive** : show a notice that referral rewards may require an active account + a Restart button (§8).
- "Review status" opens the referral status view.

11. Account

- Shows detail cards: **Name**, **Email**, **Shipping address**, **Payment method**.
- Each card has **Edit** → opens the matching edit modal (**Edit name** / **Edit email** / **Edit shipping address** / **Edit payment method**) → save → the card reflects the change.
- No dead edit buttons — every Edit must open a working form and persist.

12. Miscellaneous flows (don't miss these)

Small surfaces that still need real behavior:

Trigger	Location	Behavior
Add product / Add new subscription	Home (active)	Opens product selection → confirm → adds a new, separate subscription (respects R2 — it's its own record).
Cancel intro — "Skip next order"	Start of cancel flow	Offers to skip the next order before entering the reason list; taking it skips and exits the flow (retention).
Order details	Order History	"View details" opens the order's detail view (items, totals, fulfillment) — not a dead button.
Log out	Nav	Confirms and ends the session.
Refer a Friend — Review status	Refer page	Opens the referral status view.

Multiple subscriptions (R2 restated): the data model must key everything by **subscriptionId** . "Add product" creates a second subscription; cancelling/pausing/ reactivating one must leave the others untouched. This is the single biggest data bug in the current build and must be fixed at the model level, not per-screen.

13. Confirmation / success pattern (styling contract)

Reuse one consistent, styled success component across restart, cancel, pause, offers, and gift claims:

- Circular status icon (green check for positive, neutral for cancel).
- Kicker (e.g. "You're back", "Paused", "Cancelled", "Done").
- One-line headline + short supporting line.
- Summary of what changed (product / date / gift).
- Single primary button back to the relevant page.

Every flow **must** land on this screen. A flow that ends on a silent toast or just closes the modal is incomplete.

14. Checklist to consider a flow "done"

- [] The button changes real state (R1).
 - [] It ends on the styled confirmation screen (§13).
 - [] It touches only the selected subscription (R2).
 - [] If it's a keep-vs-leave choice, the "stay" button is highlighted (R3).
 - [] The page reflects the new state after returning (R4).
 - [] Offers/gifts respect their segment rule and one-time vs recurring distinction (R5, §7).
 - [] Cancellation has distinct per-reason content and a final confirmation step (§6).
-

Reference implementation (all of the above working): <https://omni-customer-portal-delta.vercel.app>
